

Ranjith E

Python Developer

+91 7904046171 | ranjithe06@gmail.com | Chennai, India 600042

Summary

Python Developer with 2+ years of experience building scalable web applications using Python, Django, Django REST Framework, and REST APIs. Skilled in backend development, generative AI integration, asynchronous task processing with Celery and Redis, third-party API integrations, and multi-tenant SaaS architecture with a focus on performance and automation.

Technical Skills

- **Programming Languages:** Python, JavaScript, SQL
- **Frameworks:** Django, Django REST Framework, Bootstrap
- **Databases:** MySQL, PostgreSQL, SQLite
- **Backend and Messaging:** Celery, Celery Beat, Redis, REST APIs, JWT, OAuth 2.0
- **AI and LLM:** Generative AI, Gemini API, OpenAI API, Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Vector Search
- **Cloud and DevOps:** AWS, Docker, Kubernetes, Cloudflare R2
- **APIs and Integrations:** Meta Graph API, Google Ads API, Instagram API, Payment Gateway Integration
- **Tools and Web:** Git, GitHub, HuggingFace, Pandas, HTML5, CSS3

Experience

Python Developer

June 2024 – Present

M7 Corporation, Chennai, India

- Developed scalable backend systems using Python and Django for internal management tools and multi-tenant SaaS platforms.
- Designed and implemented REST APIs using Django REST Framework for data integration and service-to-service communication.
- Built an AI-powered ad creation platform that generates branded posters and carousels using generative AI and automates Instagram publishing, reducing creative turnaround time from hours to minutes.
- Implemented asynchronous task processing pipelines using Celery and Redis for AI image generation and scheduled social media publishing.
- Integrated third-party APIs including Meta Graph API, Google Ads API, payment gateways, and cloud storage solutions to support business workflows.
- Built responsive full-stack web applications using Django, HTML, CSS, and JavaScript.

Projects

AdFlow - AI-Powered Ad Creation and Publishing Platform

- Built a multi-tenant SaaS platform that generates branded marketing posters and Instagram carousels from a single campaign brief using generative AI models (Gemini, OpenAI, Replicate), with scheduled auto-publishing to Instagram via the Meta Graph API.
- Designed an asynchronous image generation pipeline using Celery with poll-based progress tracking that survives page refreshes, enabling users to watch carousel slides render live as they complete.
- Engineered structured prompt pipelines enforcing brand consistency, including workspace logo injection, visual storytelling composition rules, and layout constraints across poster and carousel formats.
- Implemented JWT-based authentication with organization and workspace hierarchy, providing each client isolated branding assets, campaigns, and publishing accounts.
- **Technologies:** Python, Django, Django REST Framework, Celery, Celery Beat, Redis, Gemini API, OpenAI API, Replicate API, Meta Graph API, JWT, HTML, CSS, JavaScript

Memories - Photography Studio Management Platform

- Developed a multi-tenant SaaS platform for photography studios to manage clients, events, and media with cloud storage, including event management, photo selection workflows, personal client drives, and social media scheduling.
- Implemented role-based access control, cloud storage with presigned URLs supporting 10GB file uploads, dynamic storage quotas with trial periods, and Easebuzz payment gateway integration.
- Built PIN-protected media sharing, ZIP downloads, face detection, watermark generation, and social media management with client approval workflows.
- **Technologies:** Python, Django, PostgreSQL, Cloudflare R2, REST APIs, HTML, CSS, JavaScript

Meta and Google Ads Analytics Dashboard

- Built an advertising analytics dashboard integrating Meta Graph API and Google Ads API to track performance of 200+ ad campaigns, enabling marketers to monitor ROI and optimize ad spend through interactive reporting.
- Developed hierarchical drill-down dashboards from Campaign to Ad Set to Ad level with custom date filters and automated Excel report generation using Pandas and OpenPyXL.
- **Technologies:** Python, Django, Django REST Framework, Meta Graph API, Google Ads API, Pandas, OpenPyXL, SQLite, OAuth 2.0, HTML, CSS, JavaScript

Education

Master of Science in Computer Science <i>Hindusthan College of Arts and Science, Coimbatore</i>	2018 – 2020
Bachelor of Science in Computer Science <i>Park's College of Arts and Science, Tiruppur</i>	2015 – 2018
